

Using PGPTool to create a private and public key

1. Go to pgptool.org.
2. In the “Generate PGP Keys” tab, create your own private key and public key.
3. Set the encryption algorithm to “RSA (Recommended)”.
4. Set the key size to “2048 bits”.
5. Set the expiration to “Never”.
6. Add a passphrase, and store it safely, preferably in a password database.
7. Press “Finished” and proceed to download the keys.
8. Keep the private key to yourself!
